

28.6.21

Egyptian Beige & Grey Limestone Sawn & Tumbled Limestone will contain blemishes, veining, small chipping (to the corners and sides) and small holes, all of which are natural characteristics of stone.

These are positive characteristics and will enhance the appearance of stone.

Egyptian Beige & Grey Limestones are subject to dimensional tolerances of +/- 2mm.

Egyptian Beige & Grey Limestone cannot be butt jointed.

We recommend a minimum gap of 5mm.

We suggest mixing paving from crates prior to installation.

Always order an additional 10% to allow for wastage, cuts and the occasional piece which you may not like the look of.

All-natural stone will vary in colour, texture and natural markings.

Arbour Landscape Solutions will not give a refund or exchange stone on the basis of variation in colour, texture or natural characteristics.
