

Galvanised Gabion Baskets

A gabion wall is not only attractive, it's practical too.

Galvanised Gabion Cages/Baskets are a cost-effective and speedy installation solution for retaining wall systems. Suitable for use indoors and outdoors, they provide automatic and easy drainage. Ideal for use as erosion protection for river bank defences and sea walls, thanks to their high resistance to atmospheric corrosion.

Fill these large baskets with products such as concrete, stone, paddlestones - anything weatherproof and large enough to not slip through the cage. Can be used as a striking feature in gardens when filled with products like shells, coloured glass, wooden logs. Why not make a statement using them as water feature surroundings or garden seating? There are endless possibilities for use. These welded mesh gabions are available as flat packs, are made of 3mm galvanised steel wire, retain their shape and are free from depressions and bulges. Can be fitted easily against walls.
